Introduction

1.1 Scope of this Document

- 1.1.1 This document relates specifically to Flats A (basement) and C (upper ground floor), 14 Mornington Crescent where secondary glazing and noise attenuating mechanical ventilation is

to be installed. The property is a Grade II listed residential terraced house in Mornington Crescent, within the Camden Town Conservation Area.

1.1.2 This document does not consider the construction of the HS2 railway, which is authorised under the High Speed Rail (London-West Midlands) Act 2017 and any relevant Heritage Agreements.

1.1.3 This document only considers the following proposals which require listed building consent:

A. Installation of temporary internal secondary glazing.

Installation of internal secondary glazing to two (2) windows to the **rear** of the building for noise mitigation during construction of the HS2 railway at Euston.

B. Installation of temporary mechanical input ventilation fan(s).

Installation of two (2) mechanical ventilation units (Sonair F+ unit) to the **rear** of the building at during construction of the HS2 railway at Euston.

1.1.4 This document fulfils the requirement of National Planning Policy Framework paragraph 189 which states that *"In determining applications, local planning authorities should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets' importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant historic environment record should have been consulted and the heritage assets assessed using appropriate expertise where necessary. Where a site on which development is proposed includes or has the potential to include heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation"* and London Borough of Camden's listed building application requirements.

1.1.5 This application should be read in conjunction with the following documents:

- Existing and Proposed Drawings;
- HS2 Submission Statement; and
- Sonair Specification Sheet.

1.2 Works Affecting 14 Mornington Crescent

1.2.1 14 Mornington Crescent stands within the Camden Town Conservation Area and is a Grade II listed building. Grade II buildings are of special interest and represent 91.7% of all listed buildings.

1.2.2 As a Grade II listed building, 14 Mornington Crescent is valued for its special historic and architectural interest and is under the statutory protection of the Planning (Listed Buildings and Conservation Areas) Act 1990. Under this Act any work to a listed building that involves demolition, alteration or extension in any manner that would affect the character or

appearance as a building of special architectural or historic interest would require Listed Building Consent.

1.3 Context

1.3.1 The current application for listed building consent for HS2 works to 14 Mornington Crescent, is submitted in the context of the following statutory provisions, public undertakings & assurances, and public Information Papers:

- High Speed Rail (London – West Midlands) Act 2017
- Phase 1: HS2 Register of Undertaking & Assurances
- Environmental minimum requirements for HS2 Phase One
- HS2 Phase 1 Information Paper – E23 Control of Construction Noise and Vibration

1.4 Publications

1.4.1 The following publications have been consulted during the preparation of this document:

- 'Camden Local Plan', adopted 3 July 2017
- 'Camden Town Conservation Area Appraisal and Management Strategy', adopted 4 October 2007
- 'National Planning Policy Framework', February 2019
- 'Conservation, Principles, Policies and Guidance', Historic England, March 2015
- 'Informed Conservation: understanding historic building and their landscapes for conservation', English Heritage *now* Historic England, March 2003
- 'Managing Significance in Decision-Taking in the Historic Environment; Historic Environment Good Practice Advice in Planning: 2'. Historic England. July 2015
- 'The Setting of Heritage Assets; Historic Environment Good Practice Advice in Planning:3', *Historic England, July 2015*
- 'Energy Efficiency and Historic Buildings; Secondary Glazing for Windows.', *Historic England, April 2016*

1.5 Heritage Assets

1.5.1 **Camden Town Conservation Area:**

1.5.2 Designated in 1986, Camden Town Conservation Area is positioned centrally to the London Borough of Camden. It lies to the north of Euston Station and south of Kentish Town and is defined to the west by the rail tracks which run from Euston to Birmingham.

1.5.3 Listing Description:

1 MORNINGTON CRESCENT AND ATTACHED RAILINGS

List entry Number: 1113137

Grade: II

Date first listed: 14-May-1974

Details:

TQ2983SW MORNINGTON CRESCENT 798-1/83/1150 (South side) 14/05/74 No.1 and attached railings

End of terrace house, left hand return bay forming part of facade of No.263 Hampstead Road (qv). c1821-32. Stucco with rusticated ground floor. 4 storeys and basement. 4 windows with slightly projecting 2 window bay centre and 1 window return to Hampstead Road. Pilasters at angles (paired at left) rise from ground floor to form entablature at 3rd floor level. Asymmetrically placed prostyle portico with pilasters flanking C20 panelled door with radial fanlight. Architraved sashes. 1st floor, architraved casements with continuous cast-iron balcony; centre windows flanked by pilasters, cornice-head with segmental-arched recesses above. Deep, slightly shaped parapet.

Listing NGR: TQ2913183139

2-12 MORNINGTON CRESCENT AND ATTACHED RAILINGS

List entry Number: 1113138

Grade: II

Date first listed: 14-May-1974

Details:

TQ2983SW MORNINGTON CRESCENT 798-1/83/1151 (West side) 14/05/74 Nos.2-12 (Consecutive) and attached railings.

Terrace of 11 houses forming part of a crescent. 1821-32. Built by I Bryant. For the Southampton Estate. End of terrace houses, stucco with rusticated ground floors and 3rd floor string; others yellow stock brick (No.4 painted) with rusticated stucco ground floors and slate mansard roofs with segmental headed dormers (No.4 square). Symmetrical terrace with slightly projecting end bays (Nos 2 & 3 and 11 & 12).

EXTERIOR: 3 storeys, attics and basements; end houses, 4 storeys and basements. All with 2 windows each. Round-arched ground floor openings; sashes of end houses in shallow recesses. Most doorways with 3/4 Doric columns carrying cornice-heads; fanlights (Nos 2, 3, 11 & 12 patterned) and panelled doors. Recessed sashes; end houses architraved, others with gauged brick flat arches. 1st floors with continuous cast-iron balconies. End houses with parapets; others with stucco blocking course, only No.5 retaining cornice.

SUBSIDIARY FEATURES: attached cast-iron railings with tasselled spearhead finials to areas.

HISTORICAL NOTE: from 1905 No.6 was the home of Walter Sickert, painter & etcher. Sickert was prominent in both the Camden Town and Fitzroy Groups of painters and the subsequent London Group; during the 1890s he painted and sketched the Bedford Music Hall in Camden. (Survey of London: Vol. XXIV, King's Cross Neighbourhood (parish of St Pancras IV): London: -1952: 132).

Listing NGR: TQ2911083147

National Grid Reference: TQ 29110 83147

13-24 MORNINGTON CRESCENT AND ATTACHED RAILINGS

List entry Number: 1113139

Grade: II

Date first listed: 14-May-1974

Details:

TQ2983SW MORNINGTON CRESCENT 798-1/83/1152 (West side) 14/05/74 Nos.13-24 (Consecutive) and attached railings

Terrace of 12 houses forming part of a crescent. 1821-32. Built by I Bryant. For the Southampton Estate. End of terrace houses, stucco with rusticated ground floors; others yellow stock brick with rusticated stucco ground floors. Stucco cornices. Symmetrical terrace with slightly projecting end bays (Nos 13 & 14 and 23 & 24). 4 storeys and basements. 2 windows each, No.13 with 3 blind window return. Round-arched ground floor openings; sashes of end houses in shallow recesses. Nos 13, 16, 20 & 21 with pointed and margin glazing. Most doorways with 3/4 Doric columns carrying cornice-heads; fanlights (Nos 19 & 23 patterned) and panelled doors. Nos 13 & 24, entrances on return. Recessed sashes; end houses architraved, others with gauged brick flat arches (some reddened). 1st floors with continuous cast-iron balconies. Main cornice at 3rd floor level (Nos 14 & 15 missing). Cornice and blocking course above 3rd floor (Nos 14 & 15, cornice missing).

SUBSIDIARY FEATURES: attached cast-iron railings with spearhead finials to areas. (Survey of London: Vol. XXIV, King's Cross Neighbourhood (parish of St Pancras IV): London: -1952: 132).

Listing NGR: TQ2906383228

2 Historical Background

2.1 The development of Mornington Crescent

- 2.1.1 Mornington Crescent, Mornington Road and Mornington Street were named as a compliment to Richard Colley Wellesley, Earl of Mornington, Governor General of India, the brother of the Duke of Wellington, and afterwards better known as the Marquis of Wellesley¹.
- 2.1.2 The construction of Mornington Crescent (**Figure 1, 2, 3**) began in 1821, by I Bryant for Southampton Estate, but the full complement of 36 houses was not fully completed and inhabited until 1832. The north side was built first (numbers 37 – 46). Historical maps of the area are presented in Appendix (**Appendix 1**).
- 2.1.3 To the rear, the houses have a view across the west, towards Park Village East and Regent's Park.

¹ *Survey of London, Volume 24, the Parish of St Pancras Part 4: King's Cross Neighbourhood*, ed. Walter H. Godfrey and W. McB. Marcham (London, 1952), pp.132-133. *British History Online* <http://www.british-history.ac.uk/survey-london/vol24/pt4/pp132-133>.

Figure 1: Mornington Crescent is shown on the bottom right part of the 1834 map. The area is highlighted by the red oval, in The Camden Town Book, John Richardson (London, 2007), p. 55.

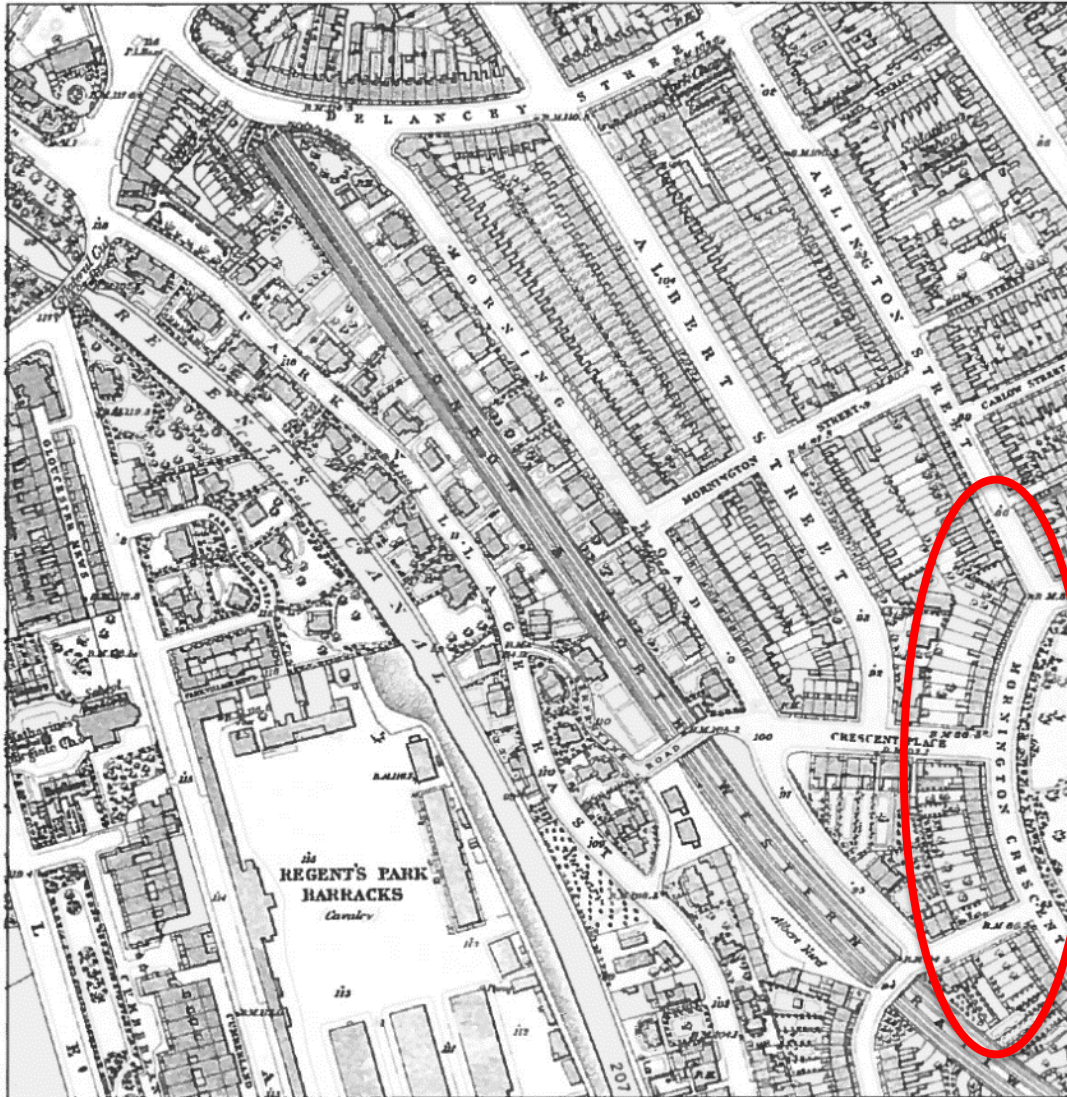

Figure 2: An 1870 map of the L & NWR route through the lower part of Camden Town – Mornington Crescent is highlighted by the red oval, in The Camden Town Book, by John Richardson (London, 2007), p. 84.

Figure 3: 'Bacon's Nine Inch Map, 1888, showing Camden Town before the railway tracks were widened. Mornington Crescent is highlighted by the red oval.', in the Growth of the Camden Town: AD 1800-2000, by Jack Whitehead (London 1999), p. 16.

- 2.1.4 The segment between Hampstead Road and Mornington Crescent was originally laid out in gardens but since 1926 has been occupied by the Carreras building (**Figure 4**). The latter was originally built as the Carreras tobacco factory and was designed by M & O Collins. In 1998, it was converted to offices and renamed as Greater London House.
- 2.1.5 Mornington Crescent encompasses 36 houses, comprising blocks of either four storeys of brick and stucco, raised on basements with mansard roofs and dormers. Most of the houses have a bold cornice above the second floor and architraves to the windows (**Figure 5, 6**).
- 2.1.6 In 1872, the house-numbering scheme of Mornington Crescent was reversed. (i.e. No 1 became No 36 and vice versa).

Figure 4: 'Carreras factory and headquarters in the 1920s.', in The Camden Town Book, by John Richardson (London, 2007), p. 43.

Figure 5: 'Nos. 1-11, Mornington Crescent c.1905', in Camden Town and Primrose Hill Past: a visual history of Camden Town and Primrose Hill, by John Richardson (London, 1991), p. 123.

Figure 6: 'Nos. 13-24, Mornington Crescent', in Survey of London: Volume 24, the Parish of St Pancras Part 4: King's Cross Neighbourhood, ed. Walter H Godfrey and W McB. Marcham (London, 1952), p. 89. British History Online <http://www.british-history.ac.uk/survey-london/vol24/pt4/plate-89> [accessed 12 December 2018].

2.2 Social History

- 2.2.1 1 Mornington Crescent was occupied by the marine artist and friend of Charles Dickens, Clarkson Stanfield (1793-1867).
- 2.2.2 In 1872, the house-numbering scheme of Mornington Crescent was reversed. (i.e. No 1 became No 36 and vice versa). The then No 36 was occupied by Frederick Pickersgill RA (1820-1900). Pickersgill was a historical painter and a trustee and keeper of the Royal Academy. In 1866, the property was occupied by the French architect, Edward L Paraire. During WWII, No 1 was used as a "commercial school" and subsequently as an annexe of the National Temperance Hospital, Hampstead Road. From 1984, No 1 is occupied by the composer Wilfred Josephs.
- 2.2.3 6 Mornington Crescent was occupied by the German-born artist Walter Richard Sickert (1860-1942). Sickert was an English painter, printmaker and leading member of Camden Town Group.
- 2.2.4 Until 1970s, no 25A was a Waney's grocery store.
- 2.2.5 For two decades, no 28 (once no. 9) was occupied by the political agitator Henry Vincent (1813-78), who was also known in Chartist circles as the 'Demosthenes of the West'.
- 2.2.6 A room of no 31 was rented during 1909-12 by Spencer Frederick Gore (1874-1914), who was an artist (painter of landscapes, music-hall scenes and interiors) and leading member of the Camden Town Group.

2.3 Timeline

2.3.1 A brief chronology is included of the development of Mornington Crescent and the railway which has played a significant part in the creation and change of the local area. Significant local and national social history is included for context.

- 1811 King George III declared insane and parliament approved the 'Care of King During his Illness etc. Act 1811'. On 5 February 1811, George IV, Prince of Wales was appointed HRH The Prince Regent
- 1820 29 January 1820 King George III died and his son, HRH Prince Regent, George Augustus Frederick Hanover anointed King George IV
- 1821 Mornington Crescent construction began by I Bryant for the Southampton Estate
- 1823 Mornington Crescent numbers 3, 5 and 7 were occupied
- 1830 26 June 1830 King George IV dies and his brother, William Henry Hanover becomes King William IV until his death on 20 June 1837
- By 1832 First complement was found; 36 houses were completed and inhabited
- 1834-37 Construction of the London & Birmingham Railway from Camden Town to Euston and rail cutting created to the west of Park Village East
- 1837 20 June 1837 King William IV dies and Alexandrina Victoria Hanover daughter of Prince Edward, Duke of Kent and Strathearn, the fourth son of King George III, becomes Queen Victoria
- 1837 The Euston to Boxmoor section of railway opened on 20 July 1833, and the 32-mile (52 km) line from Euston to Tring (and another section south from Birmingham) was opened in October 1837
- 1838 The railway through line from London to Birmingham opened for public service on 17 September 1838
- 1846 London & Birmingham Railway amalgamated with other rail companies to become London & North Western Railway (LNWR)
- 1872 The house-numbering scheme of Mornington Crescent was reversed. (i.e. No 1 became No 36 and vice versa)
- 1926-28 The Carreras building, 180 Hampstead Road, is built. The building occupied the segment between Mornington Crescent and Hampstead Road, which originally was a green open area.
- 1937 Mornington Court is built on the corner of Mornington Crescent and Arlington Road. The contemporary dwelling has Egyptian-style building elements.
- 1998 The Carreras building is restored and converted into office building. It was renamed as Greater London House.

3 Statement of Significance: 14 Mornington Crescent

3.1 Purpose of the Statement of Significance

- 3.1.1 In conservation, 'significance' encompasses a broad range of considerations about what may constitute the special value or 'interest' of a building or place; these are referred to as the 'heritage asset'. Commonly, a mix of factors may contribute to this special value, such as a building's architectural quality and association with important people or cultural events. Sometimes, these factors may not be immediately apparent, such as the use of pioneering construction technology, fine craftsmanship or the special social or economic role a building or place has within a community.
- 3.1.2 A statement of significance provides a concise account of the reasons why heritage assets are valued and why they should be protected and preserved. The statement can provide a more thorough appraisal than a listing description alone. They can help clarify which items or elements have little or no value, or which actively detract from significance, to allow for exploration of opportunities for enhancement or change.
- 3.1.3 Within this document, significance is determined as follows in accordance with heritage values identified by Historic England in *Conservation Principles* (2008):
- **Evidential value:** the potential of a place to yield evidence about the past
 - **Historic value:** the ways in which past people, events and aspects of life can be connected through a place to present – usually illustrative or associative
 - **Aesthetic value:** the ways in which people draw sensory and intellectual stimulation from a place
 - **Communal value:** the meanings of a place for the people who relate to it, or for whom it figures in their collective experience or memory
- 3.1.4 The following is a guide to comparative levels of significance:
- **Exceptionally significant:** nationally and/or internationally significant aesthetic, cultural, evidential or communal significance; exceptional, unique, and intact features of highest quality; nationally and/or internationally important associations with people or events; the setting of the heritage asset is an intrinsic part of the overall significance and is largely intact and or well preserved; unquestionable group value
 - **Highly significant:** important historic or architectural features; high quality of workmanship; potential for nationally important archaeology; largely intact and/or rare examples of a building type or technique; the setting of the heritage asset makes an important contribution to the significance, values, and legibility of the heritage asset – change and alteration to the setting may be present, but evidential, historic, aesthetic and/or communal values remain; important group value
 - **Significant:** formal or aesthetic significance, architectural character or notable features, including areas with potential for significant enhancement; setting contributes to the heritage asset's legibility, form and/or scale but includes extant alterations which have altered or diminished the special interest; some positive group value

- **Low significance:** little or no architectural or heritage significance or area of lost significance; the setting of the heritage has been extensively altered to the point where it has a very low value and further change to the setting
- **Not significant:** of no heritage interest
- **Detrimental:** features or areas that detract from a building's special significance

3.2 Architectural and Historic Significance

- 3.2.1 It should be noted that listed buildings are protected for their special architectural or historic interest therefore these elements of its significance are of particular importance.
- 3.2.2 Mornington Crescent and surrounding streets were laid out from c. 1821. The Crescent encompasses 36 houses, comprising blocks of brick and stucco storeys, natural slate roofs and cast-iron doorcases and balconies.
- 3.2.3 Mornington Crescent was originally built as a sweep of houses, including tennis courts and gardens in the front. The latter were maintained as a private space for key holders only and tenants paid an annual garden tax in order to use them².
- 3.2.4 At the beginning of the twentieth century the area was occupied by artists. The Camden Town artists painted the cafes, the streets, the music halls and public parks.
- 3.2.5 At the start of WWI and by the time that house building slowed down the Crescent became a wasteland, the gardens were no longer maintained and the tennis courts fell into disrepair².
- 3.2.6 The curve of Mornington Crescent is recognised as a 'key view' in the London Borough of Camden, Camden Town Conservation Area.
- 3.2.7 Properties on Mornington Crescent have historic cast-iron railings around basement areas with various patterns of finials (i.e. urn shaped). Original locally cast metal coalhole covers and bollards set into York stone paving outside properties populate the street.
- 3.2.8 Mornington Crescent had originally a splendid rear view, since there was little obstruction between the latter and Regent's Park. However, the landscape and setting of Mornington Crescent have been substantially altered with the widening of the rail cutting in 1900-1905. The railway affected the social status of the area and caused the transition of the houses into cheap lodging places³. Despite these considerable changes, Mornington Crescent still retains important architectural and communal values in its setting. The setting of 14 Mornington Crescent and the Crescent as a whole is considered to make a **SIGNIFICANT** historic and aesthetic contribution to the heritage asset.

² Whitehead, J. (1999). *The growth of Camden Town: AD 1800-2000*. London: The author.

³ Richardson, J. (1991) *Camden Town and Primrose Hill past: a visual history of Camden Town and Primrose Hill*. London: Historical Publications.

- 3.2.9 14 Mornington Crescent has **SIGNIFICANT** architectural, historic and aesthetic value as part of the Crescent, originally designed as a single, architecturally uniform, complement of houses.
- 3.2.10 The basement and upper ground floors retain little early detailing. The architectural and historical value of the interior is of **LOW SIGNIFICANCE**.

3.3 Communal Significance

- 3.3.1 Mornington Crescent is valued because of the quality of the buildings and the immediate landscape and setting, and the contribution to the wider late Georgian and Early Victorian townscape of Camden which comprises Delancey Street, Albert Street, Mornington Place and Mornington Terrace with terraced houses in relatively quiet largely residential roads. These values contribute to the **SIGNIFICANT** communal value.

3.4 Schedule of Significant Elements: 14 Mornington Crescent

- 3.4.1 The following schedules provide guidance on the heritage significance of the grade II listed 14 Mornington Crescent and forms the basis for the assessment of impact that follows in section 4 'Design Statement & Statement of Justification'. The schedule assesses those elements of the listed buildings that have Evidential, Historic, Aesthetic & Communal value and could be affected by the proposed works.
- 3.4.2 Since the scope and extent of the proposed work is limited, the schedule of significance has also been limited to building elements, which directly or indirectly might be considered to be impacted by the proposals. The broad grading of significance outlined in point 3.1.4 is used.

Item No.	Element	Location	Date	Heritage Values	Significance	Description of Assessment of Significance
1	The setting of the heritage asset	Mornington Crescent	c.1821	Evidential, Historic, Aesthetic & Communal Value	Significant	<p>The setting of 14 Mornington Crescent has a shared or group value with the houses in the Crescent building including 1, 2-12, 13-24.</p> <p>The setting comprises views along Mornington Crescent, the view and appearance of the buildings within the townscape, and views across the rail cutting towards Park Village East.</p> <p>The setting is also concerned with experiencing Mornington Crescent as part of Camden's Georgian and Victorian townscape. External alterations to the building and landscape, unless very carefully executed, could have a significant detrimental impact on the</p>

						<p>perceptual experience of visitors, property owners and the local community. In general, changes to the setting should be of a character and style that maintain or enhance the visual and perceptual experience of being in Mornington Crescent. Examples of alterations and repair which would enhance the setting include: reinstating railings along the boundary between the houses and roadway footpath; reinstating sections of missing cornice and stucco details on the terraced building, painting the external stucco details, windows and railings in a uniform colour to strengthen the architectural uniformity.</p> <p>Installation of external secondary glazing, even on a temporary basis for approximately 10 years would diminish the architectural uniformity and provide a stark contrast to historic fenestration and glazing. Secondary glazing would give the impression of modern windows being installed and would harm the emotional experience for residents, the local community, and visitors.</p> <p>Mornington Crescent is described as a 'Key View' in the Camden Town Conservation Area.</p>
2	Building Façade	Rear façade	c.1821	Evidential, Historic & Aesthetic values	Low Significance	<p>Rear Elevation</p> <p>The rear elevation is constructed of yellow London Stock brick in contrast to the white rusticated stucco front façade. Unlike the front façade, windows to the rear are of a much simpler design with limited detailing. There is a later flat roofed, two storey addition to the rear comprising modern doors and windows.</p> <p>Further alteration, repair and decoration should seek to enhance the original design, appearance and uniformity.</p>

3	External Windows and Doors	Rear façade	c.1821	Evidential, Historic & Aesthetic values	Low Significance	Flat A - Basement bedroom The window in the basement level bedroom is a later addition installed at an unknown time within the 20 th century. The window comprises a single glazed metal tripartite casement with a thin metal security grille fixed internally.
			c.1990		No Significance	Flat C - Upper ground floor bedroom The window at upper ground floor comprises part of the 20 th century rear addition. The rear window is a double-glazed uPVC fixed window with two hinged openings to the top and left hand side.
4	Room interiors (space, proportions, size and scale)	Internal rooms	c.1821	Evidential, Historic & Aesthetic values	Low Significance	Flat A - Basement bedroom All relevant rooms at basement level survive largely in their original forms and are used as originally intended. They retain little original detail but the sense of space, scale and function of these rooms is an important part of this property and contributes to the understanding of row houses of this period. Changes to the rooms should wherever possible maintain these qualities. Changes on a temporary basis could be justified provided they were easily reversible with low to very low physical impact.
			c. 1990		No Significance	Flat C - Upper ground floor bedroom The single room studio flat is within the later 20 th century addition and is of little to no evidential, historic or aesthetic value.

3.5 Camden Town Conservation Area

3.5.1 Subdivided into two distinct character areas: the commercial high street to the northeast and the quieter, more formal residential area to the southwest, this part of Camden Town Conservation Area represents a phase of late urbanisation while it was subsumed into Greater London.

- 3.5.2 The Conservation Area is celebrated for its high proportion of C19th buildings, and there is an overall C19th architectural and historic character and appearance throughout.

4 Design Statement & Statement of Justification

- 4.1.1 The following section is a description of the proposed works with analysis of the impact of the proposals on the significance of the heritage asset (Impact Assessment) and justification for why the proposals should be granted Listed Building Consent.

4.2 Noise Mitigation during Construction of HS2

- 4.2.1 In constructing the scheme, HS2 will take all reasonable steps to ensure that noise does not cause an adverse effect. However, there may be instances where construction noise may cause a material change in behaviour and/or attitude, e.g. avoiding certain activities during periods of intrusion; where there is no alternative ventilation, having to keep windows closed most of the time because of the noise; potential for sleep disturbance resulting in difficulty in getting to sleep, premature awakening and difficulty in getting back to sleep. Where this occurs noise insulation (or temporary re-housing) will be offered with the aim that noise from the construction of the Scheme does not give rise to significant adverse effects on health and quality of life. The threshold noise levels above which noise insulation would be offered to dwellings and other buildings lawfully used for residential purposes are defined within the HS2 Information Paper 'E23: Control of Construction Noise and Vibration'. This is a publicly accessible document available at <https://www.gov.uk/government/publications/hs2-information-papers-environment>
- 4.2.2 Initially eligibility for the scheme depends on the predicted noise level following the assessment undertaken as part of the environmental assessment. If the noise predictions indicated that a property is eligible, the offer of noise insulation or grant for noise insulation is being made and, if accepted and all necessary approvals obtained, the insulation will be installed before the start of works predicted to exceed the noise insulation criteria

4.3 Installation of Temporary Internal Secondary Glazing & Mechanical Ventilation Units

- 4.3.1 Refer to design drawings:

Floor/ room	Existing Arrangements	Proposed Details
Basement (Flat A)	WPI Po66B NI - 14A MC-EX-BS-J-01	WPI Po66B NI - 14A MC-PR-BS-J-01.1
		WPI Po66B NI - 14A MC-PR-BS-J-01.2

Upper Ground Floor (flat C)	WPI Po66 NI - 14C MC-EX-FF-J-02	WPI Po66 NI - 14C MC-PR-FF-J-02.1
		WPI Po66 NI - 14C MC-PR-FF-J-01.2

4.4 Schedule of Proposed Works

4.4.1 Listed building consent is sought for the following works:

Basement

- a) One Sonair F+ unit (from Titon or similar) in the rear bedroom, installed to the rear external wall (Chapter 6, Figure 7);
- b) Temporary internal secondary glazing to one (1) window to the rear of the property.

Upper Ground floor

- c) One Sonair F+ unit (from Titon or similar) in the rear bedroom, installed to the rear external wall (Chapter 6, Figure 8);
- d) Temporary internal secondary glazing to one (1) window to the rear of the property.

4.4.2 Specialist contractors will provide Method Statements prior to installation.

4.4.3 A 106mm dia. hole will be core drilled through the existing external brick wall to allow a ventilation fan to be installed within the room. Cut lines will be confined to bedding joints where possible to minimise impact to the fabric of the wall and to facilitate re-insertion of bricks after the unit is removed.

4.4.4 As few bricks as possible will be carefully removed from the wall to allow insertion of a plain metal grille, behind which the duct from the fan unit will be concealed. The internal fan unit will be located just above floor level within the rear facing bedroom.

4.4.5 On removal of the fan unit, the opening will be repaired using reclaimed London stock brick to match the existing and rendered to match the surrounding existing stucco finish.

4.4.6 Refer to following elevation drawings for indicative location of the mechanical input ventilation fan:

- WPI Po66 NI - 14A MC-EX-EL-01 (Flat A - Basement)
- WPI Po66 NI - 14C MC-EX-EL-03 (Flat C - Upper ground)

4.5 Design Proposal

Photographs illustrating the existing windows are included at the end of this section.

- 4.5.1 The proposed design for internal secondary glazing and mechanical ventilation has been prepared by a specialist secondary glazing contractor in consultation with a historic buildings professional and HS2. The design is intended to meet the functional requirements of reducing noise within the residential home (14 Mornington Crescent) whilst minimising the impact on the significance of the heritage asset and minimising inconvenience to the resident. The proposal for internal secondary glazing and mechanical ventilation includes the following aspects:
- 4.5.2 **Noise mitigation.** Secondary glazing and mechanical ventilation are temporary measures to mitigate increased noise levels created by construction of the HS2 railway.
- 4.5.3 **Window design and materials:** The secondary glazing windows will be manufactured from aluminium with a polyester powder coating or similar and be installed into a new timber subframe which is fixed to the existing wall surface or window reveal. The windows will be glazed with 8.8 mm laminated glass for acoustic attenuation.
- 4.5.4 **Minimising external visual impact on existing windows:** Secondary glazing will be installed internally on the proposed windows. The position of the secondary glazing frame will align with the original window frame and sash positions to minimise visual impact when viewed externally. The secondary glazing must be set back internally from the original window position to achieve the desired acoustic performance and minimise noise levels from the HS2 works. When viewed externally, the secondary glazing might be seen by a discerning person when viewed obliquely. Some reflection on the secondary glazing may also be evident from the original windows. The external visual impact on the significance of the heritage asset will be low to very low and is an accepted consequence of installing secondary glazing into historic buildings. This minor visual impact will be removed when the secondary glazing is removed at the completion of the HS2 construction works. The mechanical input fan will be installed through the external wall to the rear of the building as shown in the application drawings. Externally, as few bricks as possible will be removed.
- 4.5.5 **Reducing internal visual impact for the residents:** The secondary glazing frame section size is minimised to ensure original glazing sightlines are maintained. The secondary glazing frame will be powder coated white or to match the existing surrounding joinery.
- 4.5.6 **Maintaining existing window functionality:** All existing windows will remain operable with the secondary glazing installed. Existing sash windows can be cleaned and maintained.
- 4.5.7 **Fixing the secondary glazing:** A secondary glazing timber subframe will either be fixed to existing plastered window reveals or existing timber window reveals. The secondary glazing will then be screw fixed to the sub-frame.
- 4.5.8 **Colour scheme:** The secondary glazing, glazing insert and new sub-frames will be finished in white on all visible faces or will match the existing surrounding joinery colour. This design approach will minimise visual impact internally.
- 4.5.9 **Mechanical Ventilation Fan Unit (Sonair):** Installation of the mechanical input fan will require a 106mm (dia.) hole to be drilled through the external wall. The external wall is composed of yellow London stock brickwork and constructed in a lime mortar and finished internally with a

plain lime wall plaster. The fan will be installed just above floor level at ground floor and includes push button controls to increase or decrease the volume of air entering the building; ventilation rates can be adjusted from 28m³/h to 225m³/h. The device can be turned off when required. The unit is powered using a simple 13amp cable which is routed to the closest 13amp socket. When switched off and during power cuts, the device provides 2882mm² EA of background ventilation⁴. For details and dimension of the Sonair F+ see specification included within this application.

4.5.10 **External Grille:** It is proposed to install a plain metal grille to be flush with the external wall in keeping with the historic character of the building. The external grille will be simply detailed and painted to match the existing external wall colour. Where it is proposed to be set within an un-rendered brick wall, the grille will be finished in black.

4.5.11 **Temporary installation:** On completion of the HS2 construction works the secondary glazing and input fan will be removed and the hole through the masonry wall will be repaired. Secondary glazing will be removed from the property and recycled. Fixings will be carefully removed to prevent damage to existing building fabric and joinery:

1. Fixing holes in the existing timber joinery will be filled with a good quality wood filler and finished flush with the surrounding joinery surface. The internal face of the existing window joinery will then be redecorated to match the existing colour.
2. Fixing holes in the existing plastered window reveals will be filled with a good quality plaster filler and finished flush with the surrounding wall surface. The internal window reveal and existing window joinery where the secondary glazing was installed will be redecorated to match the existing colour.

4.5.12 Bricks which have been drilled through for the mechanical ventilation duct will be cut out and replaced with salvaged bricks to match the existing size, colour and appearance, installed using a lime mortar to match existing. New mortar joints will match the surrounding existing joints in colour and profile. Internally the wall plaster will be repaired and painted to match the existing wall. The wall will be redecorated internally.

4.6 Impact Assessment

4.6.1 The following section provides a summary of the impact of the proposal on the significance of the heritage asset.

4.6.2 This section also provides a statement of the national and local planning policies which the proposal has complied with.

4.6.3 The following categories of impact (harm) are used:

- **HIGH** – Work that is expected to have a significant detrimental impact on the heritage fabric and the setting of the heritage asset, e.g. important historic or architectural features will be permanently removed and/or work will alter the character of primary architectural or

⁴ Titon Test Report No. MD0015b dated 08/11/2007 for Sonair F+ with G2 filter.

historic elements and work to the building exterior which significantly alters the experience of the setting.

- **MEDIUM** – Work that will have some impact on architectural or historic details e.g. surviving decorative details may be disturbed in areas that through previous alterations have already suffered partial loss, or new work will conceal original features and reduce legibility but is potentially reversible. Work may also cause harm to the setting of the heritage asset possibly in a smaller localised way.
- **LOW** – Work in areas where, (1) because of earlier alterations there is little remaining fabric of historic or architectural significance or (2) the work will be managed with minimal disruption to the existing building and will have minimal impact on the significance of the heritage asset. Work may include small localised change that does not impact on the setting of the heritage asset.
- **NEGLIGIBLE** – Work to the heritage asset that has very slight change to the significance and has no impact on the setting of the heritage asset.
- **NO CHANGE** – the proposals have no impact on the significance or setting of the heritage asset.
- **ENHANCEMENT** – Work that is expected to result in significant overall enhancement to the heritage asset and/or setting of the heritage asset.

4.7 Impact of the Proposed Design

4.7.1 Installation of temporary internal secondary glazing and mechanical ventilation has a **LOW** impact on the setting of the heritage asset on Camden Town Conservation Area. The proposed design has a **LOW** impact on the special interest and character of the grade II listed 14 Mornington Crescent for the following reasons:

4.7.2 14 Mornington Crescent:

1. The visual impact of the external ventilation grille will be minimised by careful and consistent positioning in relation to the other existing openings on the rear facade. The external ventilation grille will be finished in a traditional fashion to match the existing external wall finish. Where it is proposed within an un-rendered brick wall, the grille will be finished in black. Works will be contained to the rear of the building.
2. The installation of fan units will provide additional levels of ventilation, allowing continued residential use of 14 Mornington Crescent as a residential dwelling. The proposed design takes all reasonable steps to improve ventilation and ensure the health and well-being of the residents, whilst maintaining minimum levels of disruption to the existing building fabric.
3. The position of the internal secondary glazing frame will align with the original window frame and sash positions to minimise visual impact when viewed externally. The external visual impact on the significance of the heritage asset will be minimal given the location of the works to the rear.
4. Primary elements of significance will remain unaffected.

4.7.3 Camden Town Conservation Area:

1. The impact will be negligible to the overall streetscape of Mornington Crescent and adjacent roads as the works will be solely to the rear of the terrace. Should a substantial

number of other properties require mechanical ventilation there may be cumulative impacts of the presence of many other similar grilles on the group of listed buildings, although these will where appropriate be sited consistently and unobtrusively to minimise harm.

4.7.4 The installation of both secondary glazing and mechanical ventilation is temporary and reversible. Internal and external building fabric will be restored to its previous condition following the removal of both.

4.7.5 The overall level of harm caused by the proposed works can be assessed by measuring the impact of the proposals against the significance of the asset as shown in Table 1 below.

IMPACT SIGNIFICANCE	HIGH	MEDIUM	LOW	NEGLIGIBLE	NO CHANGE	ENHANCEMENT
EXCEPTIONALLY SIGNIFICANT	Major adverse	Major adverse	Moderate	Minimal	Neutral	Major Beneficial
HIGHLY SIGNIFICANT	Major adverse	Major/ moderate adverse	Minimal	Neutral	Neutral	Major Beneficial
SIGNIFICANT	Major adverse	Moderate	Minimal	Neutral	Neutral	Beneficial
NOT SIGNIFICANT	Moderate	Minimal	Minimal	Neutral	Neutral	Neutral
DETRIMENTAL	Minimal	Minimal	Neutral	Neutral	Neutral	Minimal

Table 1: In order to measure the harm caused by the proposed works, the impact can be measured against the significance of the asset.

4.7.6 Using the table above, it can be seen that the proposed works will result in minimal harm which indicates there will be 'less than substantial harm' caused.

4.7.7 The proposal is compliant with:

1. National Planning Policy Framework policies, 180, 189, 193, 194 and 196.
2. Camden Core Strategy 2010-2025 policies CS14 'Promoting high quality places and conserving our heritage' and CS16 'Improving Camden's health and well-being'.
3. Camden Development Policies 2010, policies DP24 'Securing high quality design' and DP25 'Conserving Camden's heritage' and DP26 'Managing the impact of development on amenity'.

4.8 Justification

- 4.8.1 Internal secondary glazing has been instated to properties identified as being impacted by noise caused by construction during the HS2 scheme. The resident of this property has requested mechanical ventilation to avoid adverse increases in internal temperatures and atmospheric moisture.
- 4.8.2 The design meets the functional requirements of providing additional ventilation within the residential property whilst introducing only minor harm to the heritage asset and minimising inconvenience to the resident. The design set out in chapter 4.5 seeks to minimise harm as far as possible with this solution.
- 4.8.3 The proposals are in line with HS2's commitments to provide noise attenuating ventilation to listed properties.
- 4.8.4 The proposed works will be reversible following completion of construction works.

5 Conclusion

- 5.1.1 The assessment of the installation of the proposed temporary secondary glazing and mechanical input ventilation fan concludes that this will introduce minimal harm to asset of 14 Mornington Crescent, its setting and Conservation Area as a whole.
- 5.1.2 Measures have been taken to minimise the impact of the works to all relevant assets, including considerations to the installation methodology, positioning and design of the fan units and the external grille.
- 5.1.3 The installation of the secondary glazing and mechanical ventilation fan is temporary and reversible. Internal and external building fabric will be restored to its previous condition following the removal both.
