Dear Sirs

### Root ID

The sample you sent in relation to the above has been examined. The structure was referable as follows:

TH1, 1.8m		
1 no.	Examined root: the family SALICACEAE (Salix (Willows) and Populus (Poplars)). This was a very IMMATURE sample.	Dead* (note this 'dead' result can be unreliable with such thin samples).

Click here for more information: [SALICACEAE](#)

I trust this is of help. Please call us if you have any queries; our Invoice is enclosed.

Yours faithfully

Dr Ian B K Richardson

\* Based mainly on the Iodine test for starch. Starch is present in some cells of a living woody root, but is more or less rapidly broken down by soil micro-organisms on death of the root, sometimes before decay is evident. This result need not reflect the state of the parent tree.
