Dear Sir,

**Air Conditioning supply and installation at: Green Light Pharmacy, 27-29 Winchester Road, Swiss Cottage, NW3 3NR**

Following air-conditioning systems are supplied and installed.

<u>Area</u>	<u>Capacity</u>	<u>Type</u>	<u>Model No.</u>
Retail + Dispensary area	12.5KW	Ducted	ARYG45LMLA
Waiting area + consulting room 1	10.0KW	Ducted	ARYG36LMLE
Basement area	10.0K x2	Ducted	ARYG36LMLE

As per drawings provided by the customer the areas of each room has been considered to select the capacity of the air-conditioning systems. The above selected capacity of the systems will provide sufficient cooling in summer months and enough heating in winter months as this is the only source of heating and cooling is there on the promises.

Bigger capacity units can be used to reduce the numbers of the units but that means the indoor and outdoor both units will be bulky in size. Indoor units will take up more space in the ceiling void and the outdoor units will be big and noisier.

Ducted aircon systems have been selected for this project. Ducted systems will distribute hot air and cold evenly to the all areas via flexible duct which is run through the ceiling. This will provide comfort temperature in all areas for customers and for the medicines. Wall mount and cassette type of units are not selected as it may not provide the heating and cooling air sufficiently in all the areas like duct systems.

Please contact us if you would like further information.

Regards

Harshad Panchal  
Director
