

Dear Rav,

I am submitting an application to remove a prominent lombardy Poplar from a garden in Belsive Park. The tree has fungal bodies in evidence on 3 sides of the lower trunk, I sent some pictures of them to a colleague of mine who produces tree surveys and he said that I should apply for its felling, I have included a number of photographs of both the position of the growths and of the tree itself. If you think I will need to provide corroborating evidence in the form of a report could you please let me know as soon as possible so that I can tell the trees owner and not slow down the application

Yours faithfully

C. HOWARD
