Planning application for 5G Mast Primrose Hill
Application number 2021/1813/P
Planning Department of LB Camden

We strongly object to the erection of a 5G Mast on Primrose Hill.

It is well known, that the radio waves transmitted by base stations are radiofrequency electromagnetic fields and have frequencies in the microwave region.

Its not exactly about death, but about impact. Research carried out in Spain 2018, concluded that as the radiation of **cell phone towers increase**, the **bird population decreases**. The number of cell phone towers with 4G technology might certainly impact the lives of birds and of humans.

Also, Mobile phone **towers make air toxic**. There are indicative studies to prove that the electromagnetic radiation is harmful to people living in the 300-meter radius of the tower.

There has been public concern over the possibility that living near phone masts could raise cancer risk of small children and clusters of cases around masts have been reported.

It's like a pneumatic drill going outside your house, you can't hear it but your body cells are being impacted by this pulsing microwave radiation. It has been reported (2004) that pulsing waves from masts interfere with electrical signals in the body, damaging the immune system.

People living close to mobile phone masts base station frequently report symptoms of electromagnetic hypersensitivity such as dizziness, headache, skin conditions, allergies and many more.

2018 – Besides cancer, people living near mobile phone base stations are at risk of headaches, memory loss, nausea, dizziness, tremors, muscle spasm, numbness etc.

January 2021 – There has been continued voicing of concerns of ill health from people living near mobile phone base stations and similar transmission sites.

Electromagnetic pollution from phone masts, effects wildlife.

Electromagnetic radiation is a form of environmental pollution. Phone masts located in their living area are irradiating continuously some species that could suffer long-term effects, like reduction of their natural defences, deterioration of their health, problems in reproduction.

Primrose Hill is reputed to be a healthy place for relaxation.
