2021/2963/T	Boucoyannis	27/06/2021 17:45:24	OBJ	<p>We would also like to object the tree felling, the reduction and reshape. This is a conservations area and should be treated as such and protected by the Council. We are against this action, as it is part of the protected landscape, it positively affects our health, view and privacy from opposite buildings. Furthermore we believe we need to protect all healthy trees in the area as the level of pollution is dangerously high and further reducing trees will affect peoples health.</p> <p>We also object this with respect to the "Trees, green spaces and biodiversity strategy" of South Hampstead</p> <p>https://www.camden.gov.uk/documents/20142/7909250/South+Hampstead+Appraisal+-+website+version+FEb11.pdf/0c576be4-69be-1bef-51ac-67f2cd821882</p> <p>:</p> <p>13.75 Many trees within the conservation area have statutory protection through tree preservation orders (TPOs). Additionally any tree within the conservation area over 75mm diameter that is not covered by a TPO is still protected and anyone proposing to cut down, top or lop a tree is required to give six weeks' notice to the Council.</p> <p>13.76 Camden's Tree Officers within the Conservation and Urban Design Team can advise on all aspects of trees on private property within the Swiss Cottage Conservation Area. (We do not see any evidence of this)</p> <p>13.80 Views along rear garden vistas and into areas of dense tree cover are characteristic of the conservation area and should be protected. Views of mature trees between buildings from the public highway provide a sense of space and openness and give the impression of properties with large rear gardens.</p> <p>13.85 The Council will generally resist the removal of trees within the conservation area unless they were dead/dying/dangerous, causing damage to buildings or not considered to be of visual or wildlife importance. The unsympathetic pruning of tree would also be resisted and the pruning of trees which have developed a natural and attractive shape and form should be preserved and protected and any application to reduce these trees will be resisted.</p> <p>We are really disappointed to see that people are still opting in damaging the very last of the natural environment left in the city and hope that this destructive attitude will end before the younger generations are to deal with terrible consequences. Last year, 117 canfield gardens also felled a 100 year old healthy tree in order to have less shade that was impacting the growth of their lawn. These are not serious reasons and directly impact peoples health. By this rate in 10 years we will be left with 0 large trees, more pollution and unbearable heatwaves.</p>

Application No: **Consultees Name:** **Received:**

Comment: **Response:**

Trees can cool cities by between 2C and 8C. When planted near buildings, trees can cut air conditioning use by 30%, and, according to the UN Urban Forestry office, reduce heating energy use by a further 20-50%. One large tree can absorb 150kg of carbon dioxide a year, as well as filter some of the airborne pollutants, including fine particulates.

Please reconsider, educate yourselves and protect the natural environment.
