Hi i have tried to add my comments but the page keeps saying it can't load so am hoping you can add this for me.

I would very much like to support this application. We bought 11 Ploughman's Close in 1996 and the field maples T8 and T9 have been progressively damaging the retaining wall beside the house. We had a report done in 2019, just before Covid, which confirms that the wall damage is as a result of root damage from these trees, so i am very happy that this report agrees that the trees are inappropriate for this area.

I also agree with other residents that the trees throughout Elm Village have really got out of control and are too big for the urban environment i am sure there must be more manageable alternatives  
Many thanks Bernadette
