SOLID STEEL DEFENDER ROLLING SHUTTERS

Strength, safety and real security are the hallmarks of DEFENDER Rolling Shutters. The strength comes from high quality steel protection, built to withstand the most persistent smash-and-grab villain or violent vandal.

These roller shutters are safety fast and can be securely positioned, either manually or electrically, in seconds. The DEFENDER is second-to-none. It meets the recommendations of local authorities and the exacting demands of modern designers. Environmentally sympathetic in appearance they are perfectly practical with easy clean surfaces.

PERFORATED STEEL DEFENDER ROLLING SHUTTERS

This practical protection shield presents the opportunity to display products when the business is closed. It actually enhances the display it protects giving the appearance of special lighting to the outside passer-by.

The Perforated DEFENDER is manufactured from 75mm perforated galvanised steel lattice interlocked and end-riveted with neat nylon locks ensuring smooth operation of the shutter at all times. There is optional polyester powder coating with a choice of many hundreds of colour specifications to match your corporate identity.

SOLID STEEL DEFENDER ROLLING SHUTTERS

Industrial application either by handchain or electric operation to meet specific requirements. Lath section curtain secured by end locks. Curtain gauge varies with size. Side channels in heavy duty steel sections. Steel fixing angles to suit all applications.

PERFORATED STEEL DEFENDER ROLLING SHUTTERS

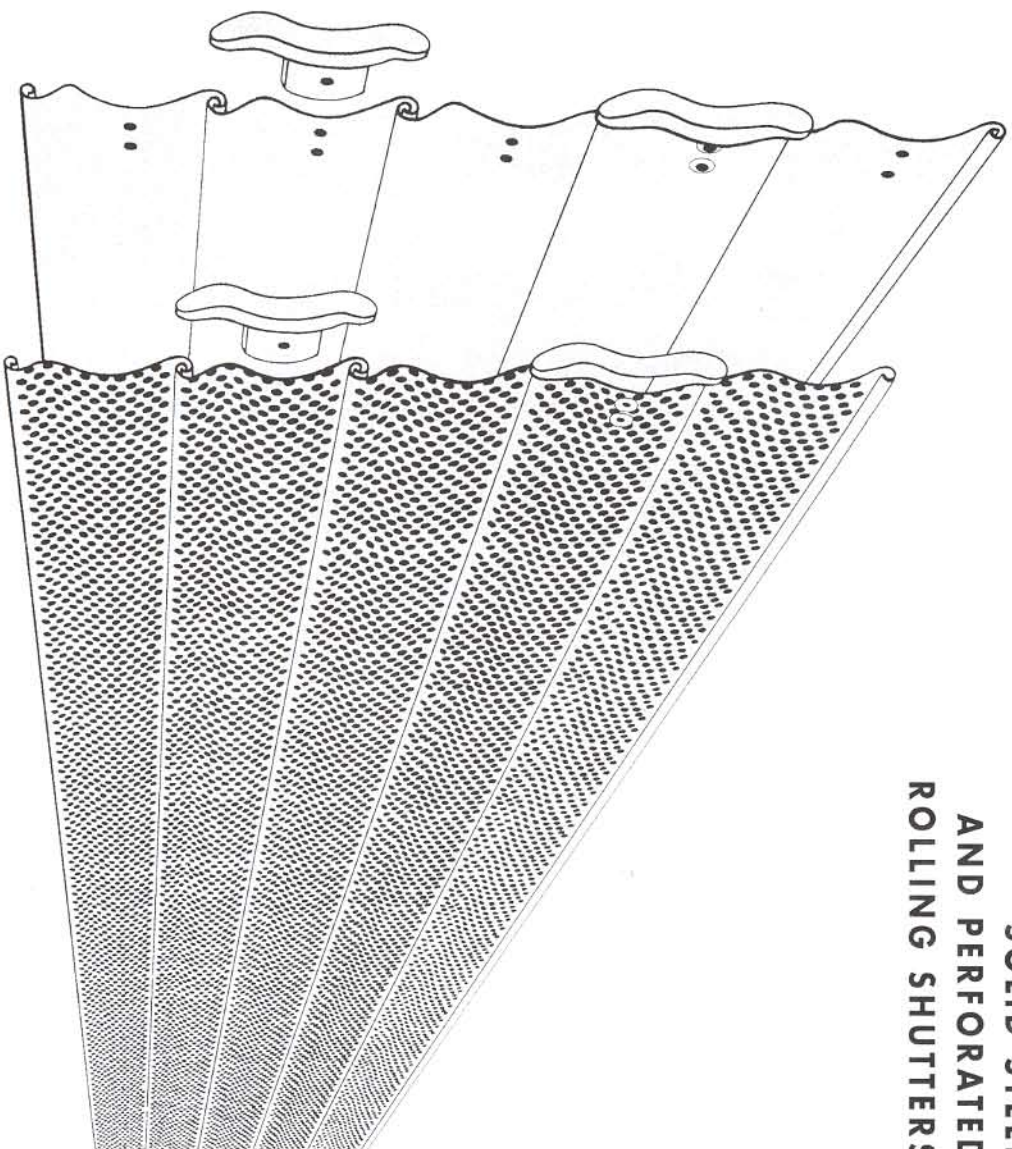

Made from pregalvanised steel section with 30% light transmission through perforations. Rolled to suit curved lath profile of nominal 75mm and flat lath profile of nominal 50mm all interlocking to continuous curtain detail. Nylon endlocks for smooth movement (maintenance free). Coprivate side channels. Spring operated rollers for hand operation to 8m² maximum or by single or three phase power operators with key switch or remote control (battery back-up available for uninterrupted supply).
