

3.6 Performance Pavilion—

4.1 Materials & Finishes—

Materials & Finishes

Steam-bent seasoned oak will make up the lattice structure of the pavilions with subtle pin fixings.

The construction takes advantage of off-site prefabrication and digitally manufactured timber components to improve quality, reduce waste, and reduce noise and dust on site. Each pavilion can be delivered to site and installed quickly to minimise disruption.

The seating will be formed from steam-bent oak and corten steel plate to match the seating approved for the wider Regent's Place landscape.

Base brackets for the timber structure will be fabricated from mild steel, galvanised and powder coated for long-term durability.
