Dear Laura,

Thank you for your patience while I discussed this with colleagues.

They have confirmed that their concerns are now satisfied. However, they would like the curfew time to be adaptable, so that the lights could be dimmed at dusk between 1<sup>st</sup> March and 30<sup>th</sup> October.

Kind regards,

Hi Laura,

Thanks for sharing that letter.

LightBureau have provided the following statement in response:

*“Our design has been developed in line with the best practices corresponding to light pollution and biodiversity concerns.*

*The proposed lighting along the canal which is part of our scope incorporates the following principles:*

- *All amenity lighting utilise well shielded luminaires with high degree of optical control that do not emit light above the horizontal plane and employ the latest LED light sources. They are all aimed downwards (L2, L3 and L4) or concealed in architectural details (L5);*
- *All luminaires are specified with dimmable drivers and should be adjusted on site during commissioning to achieve a balanced environment meeting the prescribed <5lux levels of light along the bat corridor (water surface and towpath along the water);*
- *We recommend the adoption of a curfew-based lighting control strategy with all accent and feature lighting (proposed new reveal lighting L6 and existing tree uplighting) switched off after curfew;*
- *The proposed luminaires have warm colour temperature (3000 Kelvin) light sources that do not emit ultra violet (UV) light. This avoids potential ecological impact by ultra violet light as it is known to attract flying insects and moths;*
- *Installation height along the areas of primary bat commute is limited to 4m.”*

We trust that this is acceptable, however get in touch should there be any further comments.

Anna
