

Additional information

Operational area

The operational area is entirely within the footprint of the phone box.

Illumination of sim card dispenser

Internal illumination via a static LED panel with a luminance level of 36cd/m²

Response to comments from local groups

We believe that with our proposal we will maintain the longevity of this landmark within the community and the street scene. Because it is a residential area, we think that a 24/7 card dispenser provider will be useful. Also, unfortunately, the current use is based on activities that are not associated to making a phone call.
