Sir

This is unacceptable.

The security & safety of young & old is threatened.

There are already so many antennas in the locality which can be upgraded to 5 G.

The society regulations do not permit entry with limited parking or otherwise for maintenance work which would be on going

Commercial activity is not acceptable in a private peaceful housing society.

The roof is necessary for controlling water supply water tanks cleaning piping to different flats drainage/leakages

ventilation to toilets Lift Controls mechanism & servicing etc

Roof is strictly controlled for entrance & going up by the Caretaker.

Under the given situation the 20 feet Mast installation will only aggravate the problems for the Management as also to global residents living here.

Trust you will support the society for its opposing this installation for the benefit also of neighbourhood?

With good wishes

Abhishek Narain  
Resident Lowlands
