Re: 1 Hampshire Street, London NW3 2TE

To Whom It May Concern

By way of introduction, I am the Project Manager and Main Contractor for the above development. I can confirm that no unexpected contaminants were found at any stage during the project.

With regards to potable water, please see enclosed chlorination water test which was carried out on the pipe within the building prior to Thames Water connecting the mains supply to the building which we now have. This test result was provided to Thames Water prior to connection of the mains water supply and I can confirm that they were happy with this in order to connect the building to the mains supply on the street.

Regards

Niall Smith
Project Manager & Director of OLW Construction Limited
