2022/2985/T	Juliet Bateau	15/07/2022 11:15:01	INT	<p>Is this tree to be felled on grounds of its health? This type of birch tree is subject to peeling of its beautiful white bark, with natural replacement. But trees and shrubs in this area are subject to increasingly disastrous disease and death from fungus which is causing havoc all around. At 29 Belsize Avenue, rear garden, I lost shrubs and a similar birch tree planted in 2003, which was inspected by Camden (twice, without a final diagnosis), and left in the hope of a cure over two springs, by which time it was completely dead. From last autumn until now, I have lost a strong tree peony and am losing a rose on the divide between my garden and no. 31, where close by they have lost a superb 'Cornus contraversa' which dropped dead between this spring and summer, while a very large silver birch at 9 Village Close (Philippa Lavalle), on Belsize Lane, over the wall from our gardens at 29 and 31 on the Avenue, is dead and leafless and needs felling, and a spreading ornamental red plum next door at no. 10 V... C... (Turner), over the wall from me, is losing its normally dense leaves and is probably dying. For all this, it has proved IMPOSSIBLE to contact the Tree department at Camden to ask for a general inspection and assessment. I hope this will bring a response!</p>
