Dear Camden Planning

I live next door to no. 61 so our garden is adjacent to the great tree that you intend to demolish.

You mention poisoning the stump. Will this poison damage the soil as we would like to plant another tree on our side as soon as possible? Will the soil need any treatment to prevent damage to existing plants nearby?

Can you recommend what type of tree to plant as you have recently replaced several in this conservation area?

Thankyou.

Sincerely
Pamela Royston
