Summary

Due to an enforcement policy issued by the Health and Safety Executive (HSE), Cadent Gas have been commissioned to abandon and replace approximately 191m of 200mm ductile iron low pressure gas main with new PE main along Parliament Hill, Camden.

In order to reduce the impact of our work on the environment, customers, external stakeholders and the landscape, Cadent replace gas mains via Insertion method, where possible. This consists of pushing a new smaller diameter PE pipe through the existing ductile iron gas main.

The existing gas mains along Parliament Hill pass through a number of Root Protection Zones (RPZ) of trees located in the South Hill Park Conservation Area and protected by Tree Preservation Order (TPO) status. Therefore, it may be necessary for Cadent to excavate within RPZ's of a number of trees protected Conservation Area and TPO status and severe small diameter roots.

Plans of the affected trees which are protected by Conservation Area and TPO status can be found in the 'Parliament Hill – Site Plan' document.

Site Control Measures

Cadent work to NJUG Volume 4 Standards and therefore the following measures have been put in place to minimise the impact on trees throughout the affected streets:

Prohibited Zone of a Tree RPZ (0-1m from Trunk):

- Where excavations are required within the Prohibited Zone, this will be completed via **hand-dig or vacuum excavation** and supervised by an Arborist.
- In the event where a root >25mm diameter is found and Cadent Operations may impact on the root, works will cease immediately and consultation with an Arborist will take place. Roots will only be severed if the Arborist confirms that the severance is unlikely to impact on the trees heath and stability.
- If the severance of roots <25mm diameter is required, this will be cut back using a sharp tool to leave the smallest wound.
- If possible, clumps of roots <25mm diameter (including fibrous roots) will be retained in situ without damage. Care will be taken to protect the bark around the roots.
- In an attempt to protect any roots against desiccation and temperature change, any exposed roots located in an excavation will be wrapped with dry sacking immediately after excavation has occurred. If the works are taking place during the summer months, the hessian must be kept damp with a water supply. The sacking will be removed prior to backfilling, which should take place as soon as possible.
- Prior to backfilling, retained roots must be surrounded with topsoil or uncompacted sharp sand, or other loose inert granular fill, before soil or other suitable material is replaced. This material should be free of contaminants and other foreign objects potentially injurious to tree roots.
- There will be no storage of plant, soil, fuel or machinery within the Prohibited Zone.

Precautionary Zone of a Tree RPZ (1m from Trunk – 4 x Tree Circumference):

- Where excavations are required within the Precautionary Zone, this will be completed with a **Blow Out Air Lance or Vacuum Excavator**.
- In the event where a root >25mm diameter is found and Cadent Operations may impact on the root, works will cease immediately and consultation with an Arborist will take place. Roots will only be severed if the Arborist confirms that the severance is unlikely to impact on the trees heath and stability.
- If the severance of roots <25mm diameter is required, this will be cut back using a sharp tool to leave the smallest wound.
- If possible, clumps of roots <25mm diameter (including fibrous roots) will be retained in situ without damage. Care will be taken to protect the bark around the roots.
- In an attempt to protect any roots against desiccation and temperature change, any exposed roots located in an excavation will be wrapped with dry sacking immediately after excavation has occurred. If the works are taking place during the summer months, the hessian must be kept damp with a water supply. The sacking will be removed prior to backfilling, which should take place as soon as possible.
- Prior to backfilling, retained roots must be surrounded with topsoil or uncompacted sharp sand, or other loose inert granular fill, before soil or other suitable material is replaced. This material should be free of contaminants and other foreign objects potentially injurious to tree roots.
- There will be no storage of plant, soil, fuel or machinery within the Precautionary Zone.

Permitted Zone of a Tree RPZ

- Where excavations are required within the Permitted Zone, this will be completed with a **Mini Excavator**, **Vacuum Excavator or Blow Out Air Lance**.
- In the event where a root >25mm diameter is found and Cadent Operations may impact on the root, works will cease immediately and consultation with an Arborist will take place. Roots will only be severed if the Arborist confirms that the severance is unlikely to impact on the trees heath and stability.
- If the severance of roots <25mm diameter is required, this will be cut back using a sharp tool to leave the smallest wound.
- If possible, clumps of roots <25mm diameter (including fibrous roots) will be retained in situ without damage. Care will be taken to protect the bark around the roots.
- In an attempt to protect any roots against desiccation and temperature change, any exposed roots located in an excavation will be wrapped with dry sacking immediately after excavation has occurred. If the works are taking place during the summer months, the hessian must be kept damp with a water supply. The sacking will be removed prior to backfilling, which should take place as soon as possible.
- Prior to backfilling, retained roots must be surrounded with topsoil or uncompacted sharp sand, or other loose inert granular fill, before soil or other suitable material is replaced. This material should be free of contaminants and other foreign objects potentially injurious to tree roots.

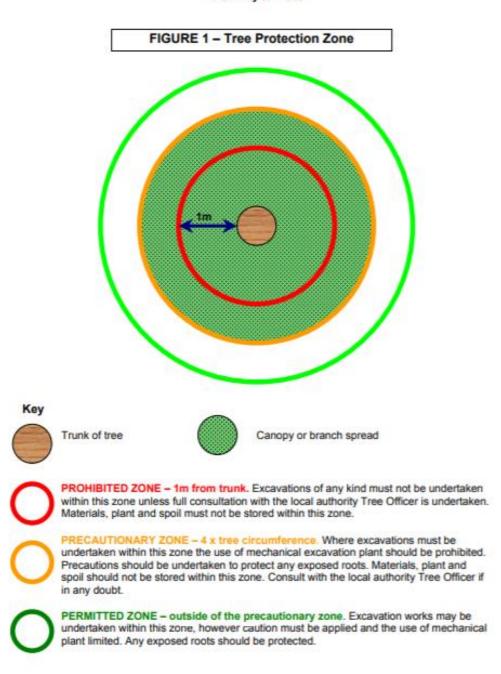

Please note the following:

- As per Cadent Operating Procedures, there will be no cutting down, topping or looping of third party trees without prior approval from the stakeholder. Any vegetation clearance taking place between 1^{st} March – 30^{th} September must have Bird Nesting check completed by an authorised ecologist.

- In the event in which a Nesting Bird is found within an excavation, plant or machinery or if Protected Species are found on site, works will cease immediately and the incident reported to the CMO Incident Line.
- In the event of an environmental incident on site, works will cease immediately and the incident reported to the CMO Incident Line.

o Tree roots >25mm diameter must not be cut
unless granted by an Arborist.
o No materials, plant or soil must be stored within
the Prohibited and Precautionary Zone (under the
tree canopy).
Any exposed roots left overnight should be
protected with Hessian sacking (wet Hessian
sacking during the Summer).
Any vegetation clearance (cutting branches,
removing sections) must be authorised from the
Local Authority. If taking place between 1st March –
30 th September, a bird nesting check must be
completed prior by a licensed ecologist. Contact
Environmental Advisor for support.
In the event on an Environmental Incident on site,
Operatives must follow ENV-001 Environmental
Emergency Plan.
