Hi Laura,

I hope you are well.

I havent had a chance to review the latest submission in detail but just wanted to give you a heads up that I will probably have comments on it. I have been very worried about the displacement of leaded soil during the works. I have seen no obvious provision explicitly protecting my family in the April 22 Remediation Method Statement. We live next door. Leaded dust can cover our garden and fly through our windows. We cannot live for two years with our windows shut down. Moreover we must walk through our garden to go home. This is a very serious health risk.

I assume we will be unable to enjoy our garden for two years given the amount of dust, including toxic dust, which will be generated.

There should be a specific section protecting the neighbouring properties, given that my garden is a fence away from the construction site.

Best wishes,

Candice Nataf-Pesonen
