

View as proposed

- 5.129 A very small part of the top of the Proposed Development would appear to the side of the Palace of Westminster, above 1 Embankment Place's roof and above Whitehall Court. This would be consistent with view's existing character of being able to see varied rooflines from multiple buildings in this part of the view. It would be a barely noticeable change to the view (and is difficult to spot even in the zoomed version of the image).

- 5.130 None of the Proposed Development would be visible immediately next to or between the pinnacles of the roof of the Palace of Westminster. The Proposed Development would not alter the Protected Silhouette of the Palace of Westminster, as defined in the LVMF.

- 5.131 The minimal visibility of the Proposed Development overall, and the likelihood of the development being imperceptible to the unaided human eye at this distance, would result in no perceptible change to this view. The existing character of the view, and the ability to recognise and appreciate the Palace of Westminster, would be wholly maintained.

View as existing

- 5.132 This view is taken from LVMF assessment point 19A.2, close to the Lambeth bank on Lambeth Bridge. It is dominated by the Thames in the foreground of the view. The Palace of Westminster dominates the north bank, and a Protected Silhouette is applied to it. The LVMF states that *'The Protected Silhouette should not be altered by development appearing in its background at or between Assessment Points 19A.1 and 19A.2.'*
- 5.133 A range of medium to large scale buildings on the Embankment, including the modern Embankment Place building, appear to the east of the Palace (right in this image). Taller elements, including the BT tower directly behind the Palace of Westminster and Space House well to its east, are seen in the background of the view.
