Dear Planners and Tree Officers,

List 703

No tree applications

List 704

No tree applications

List 705

2022/4171/T. 16 Dartmouth Park Road

Re: the proposed felling of the Gleditsia (T1) and the Snake Bark Maple (T2). I have read the Tree Report by K Martin Tree Consultancy. I have viewed T2 and noted that the bracket fungus was removed, but also that spores were found in the house and that the owner is affected by them. Approximately 30% of the cross section of the trunk of T1 is diseased, and therefore I do not object to its felling. You may/may not decide to fell T2 as the bracket fungus was small, but the owner's health must also be considered.

I do support the replacement of either tree with suitable, native species.

Thank you,

Eileen Willmott
