Ref: application 27 Goodge Street, W1T 2LD, 2022/3608/P

I reside at no.5 Colville Place. I am writing to OBJECT for installation of six air source heat pumps at such a short distance outside my bedroom window. I would like to point out each commercial air pump generates around 71 decibels level of noise, multiply it six times then plus amplified sound within a three storey air well. This intrusive level of noise pollution will be 24/7, it will transform our residential street into a noisy industrial zone. In order to reduce the noise level in my own home in a conservation area, my bedroom window will have to be closed, in fact all my windows at the rear wall will have to be closed too. Without ventilation, it will be creating stale air, mould and increased noise level at night will not only disturb my sleep but will definitely have harmful effects on my health.

At present, the noise generated from one fan extractor plus two air conditioning units from the building next to 27 Goodge Street during business hours, is able to cause my plates on my draining board to vibrate in my kitchen.
