Public Service Infrastructure - From 1 August 2021, applications for certain public service infrastructure developments will be eligible for
faster determination timeframes. See help for further details or view government planning guidance on determination periods.
Description
Please describe details of the proposed development or works including any change of use

The Biological Services Unit in the UCL Medawar Building contributes to the advancement of biomedical research through the supply of high quality research animals and services, meeting the research needs of UCL's biomedical research community. The roof houses the existing Air Handling Unit (AHU) that serves part of the BSU at level 3 of the Medawar Building. It is approaching the end of its economic life, is suffering air leakage and is at risk of failure. In addition, there is no means of providing heat recovery from the exhaust air to the supply air. The AHU plantroom is currently located within the demise of the BSU at L03. UCL's bio-security policy requires that all personnel who need to visit the AHU need to follow the 'gowning up' procedure, which can be time-consuming and disruptive.

The proposal is to install a new AHU at roof level and will be located directly above the corridor. The aged roof covering is to be re-surfaced prior to the installation of the new AHU. In addition to the general features of the existing AHU, the new AHU will also incorporate the following:

- Chilled-water cooling coil (to replace the existing refrigeration-based DX system)
- · Provision for future HEPA filters
- Acoustic attenuators (atmospheric side and room side)
- Heat recovery coil

The associated power supplies & associated controls shall also be installed in parallel with the AHU. This will enable the new AHU to be set-to-work whilst the existing AHU remains operational. The cooling to the AHU shall be provided by air-cooled water/glycol chillers. These are to be located on the roof as per the drawing. A low-temperature hot water heating (LTHW) flow and return pipework distribution shall be installed to roof level from the existing system and shall be connected and set-to-work prior to the connection of the new AHU.

Existing plant and ancillaries will be reused where feasible, otherwise replaced accordingly. Please refer to attached information package.
