Hi Martin

I have been looking into this rejection and spoke with Central to see what could possibly be done

Original dimensions 1775 h x 1700 w too large so surveyor spoke with customer and reduced dimensions.

Window was then made smaller and has been input 1494 h x 1575 w with side French casements however it is still rejected central have advised EACH opener needs to be reduced by 222mm in width or height or between height/width.

If the customer is willing to reduce the size even further then please obtain VOC – andy can you confirm this and if we reduce the size what we are then going to do with the shortfall in regards to building work required. We won't know for sure 100% if the laminated glass will affect it until it gets to inputting stage.

Regards

Maria Englefield
