## Appendices

**Appendix 1: Drawings**

**Appendix 2: Technical Analysis**

## 1 Introduction

- 1.1 This report considers the CBDM daylight and sunlight amenity of the proposed development at 330 Grays Inn Road.
- 1.2 Through the planning process the local authority will wish to be reassured that the construction of the new scheme will benefit from acceptable levels of internal daylight amenity within BRE and British Standard Guidance.
- 1.3 The Local Authority will be informed in this by the BRE document entitled Site Layout Planning for Daylight and Sunlight – A Guide to Good Practice 2022 (the BRE guidelines). This document is the principal guidance in this area and sets out the methodology for measuring light.
- 1.4 The BRE guidelines are not mandatory, though local planning authorities and planning inspectors will consider the suitability of a proposed scheme for a site within the context of BRE guidance. Consideration will be given to the urban context within which a scheme is located and the internal daylight amenity will be one of several planning considerations which the local authority will weigh.

## 2 Sources of Information

- 2.1 In the process of compiling this report, the following sources of information have been used:

### **Warner Surveys**

Survey Info (received 18/07/19)

LT3190593P0001-9.dwg

### **Allford Hall Monaghan Morris**

Proposed Drawing Set (received 20/12/22)

18116\_00\_(00)\_97 to 114, 00\_300, 02\_300, 03\_300

## 3 Methodology

### Daylight within Proposed Developments

- 3.1 The 2011 BRE guidelines were revised in June 2022. In the new 2022 revision of the BRE guidelines, a new Climate Based Daylight Modelling (“CBDM”) methodology replaces the Average Daylight Factor (“ADF”) methodology. The new methodology is more complex and has targets that are generally more difficult to achieve in an urban context.

### Climate Based Daylight Modelling (CBDM)

- 3.2 The new CBDM methodology is based on the British Standard ‘Daylight in Buildings’ (BS EN17037). This contains advice and guidance on interior daylighting for all buildings across Europe but also has a UK National Annex which provides suggested targets for dwellings in the UK.
- 3.3 BS EN17037 supersedes BS 8206 Part 2 which was based on Average Daylight Factor (“ADF”) and is no longer recommended.
- 3.4 The CBDM methodology is based on target illuminances from daylight. This is the Daylight Illuminance (DI) to be achieved over half the area of the room (measured on a reference plane at tabletop level) for at least half of the daylight hours in a typical year. The calculations are based on weather data files which cover different regions of the UK. The calculations are done for each hour of the day for every day of the year. There are 8760 hours in the year, of which 4380 are daylight hours, and therefore the targets should be achieved for 2190 hours in the year. The methodology uses a more accurate sky model which simulates the movement of the sun throughout the day and accounts for the weather conditions at the time. As a result, CBDM accounts for the presence of sunlight and therefore the orientation of the rooms/windows is accounted for. A south facing room is likely to have access to higher levels of natural light than a north facing room and as a result, a north facing room would typically need larger windows to comply.
- 3.5 The UK National Annex provides illuminance recommendations of:
- 100 Lux in bedrooms;
  - 150 Lux in living rooms; and
  - 200 Lux in kitchens.
- 3.6 These are median illuminances to be achieved over 50% of the assessment grid for at least half of the daylight hours.
- 3.7 Where a room has a shared use, the highest target should apply. However, it also says that Local Authorities could use discretion here and that a living room target of 150 Lux could be used for combined living/kitchen/dining rooms if the kitchens are not treated as habitable spaces, as it may avoid small separate kitchens in the design.

- 3.8 There is a further simplistic methodology based on daylight factors (not the same as the old ADF methodology), which does not use climate-based data but uses a simple fixed sky model. However, since this alternative simplistic methodology does not account for the effect of sunlight, or the orientation of the room, it has not been used in our assessment.

### **Sunlight within Proposed Developments**

- 3.9 For new buildings, the BRE guidelines refer to BS EN 17037 which says that a space should receive a minimum of 1.5 hours of sunlight on a selected date between 1<sup>st</sup> February and 21<sup>st</sup> March with cloudless conditions. The BRE guidelines suggests 21<sup>st</sup> March be used. For dwellings, at least one habitable room, preferably a main living room, should achieve at least this minimum criterion and that at least one main window faces within 90° of south. Whilst BS EN 17037 applies to all orientations, the BRE guidelines say that if the room faces significantly north of due east or west, the criterion is unlikely to be met.

## 4 Internal Daylight & Sunlight Amenity

- 4.1 Full and detailed analysis can be found within Appendix 1. The assessment encompasses two proposed residential blocks (North and South).
- 4.2 Stand-alone kitchens ordinarily require a 200 lux or above to be fully BRE compliant. There are no standalone kitchens material for assessment and within this development, kitchens form part of a broader room use which includes an additional living space such as living rooms and dining rooms. The kitchens tend to be located to the rear of the room where less daylight will penetrate, as a result supplementary electrical lighting will most likely be in use whenever the kitchen is in occupation. In accordance with the BRE Guidance (para 2.1.15) non-daylit internal kitchens should be avoided wherever possible, especially if the kitchen is also used as a dining area too. Noting the above it is appropriate to establish that where kitchens form part of a broader room use, a 150 lux target is most appropriate.

### Internal Daylight Amenity

- 4.3 Between the two blocks a total of 177 rooms have been analysed to establish their respective daylight illuminance (Lux level) figures in the ‘as built’ position, these are broken down into 105 bedrooms and 72 living/kitchen/dining rooms (LKDs) & Studios.
- 4.4 The CBDM daylight assessment provides that 106 of the 177 rooms will achieve the respective target illuminance value appropriate for the rooms’ usage over at least 50% of the rooms area, with many of the rooms achieving significantly above the required minimum. This provides a high overall compliance rate of 60%.
- 4.5 The generous size of the rooms means they tend to be deep, and those that derogate are generally impacted by balconies. When considering the general amenity to these apartments, a range of requirements needs to be considered. To achieve reasonable outdoor private amenity space, balconies have been provided, whilst these deliver crucial outdoor amenity, their presence will reduce access to skylight reducing the lighting levels within these apartments. As a result, a balance between providing full daylight amenity compliance versus good outdoor amenity is necessary.
- 4.6 The results demonstrate that the proposal has been well designed to maximise daylight potential to the new dwellings whilst also providing a strong balance of amenity. Overall, we consider that the amenity within these apartments is appropriate and compares with modern developments.

### Internal Sunlight Amenity

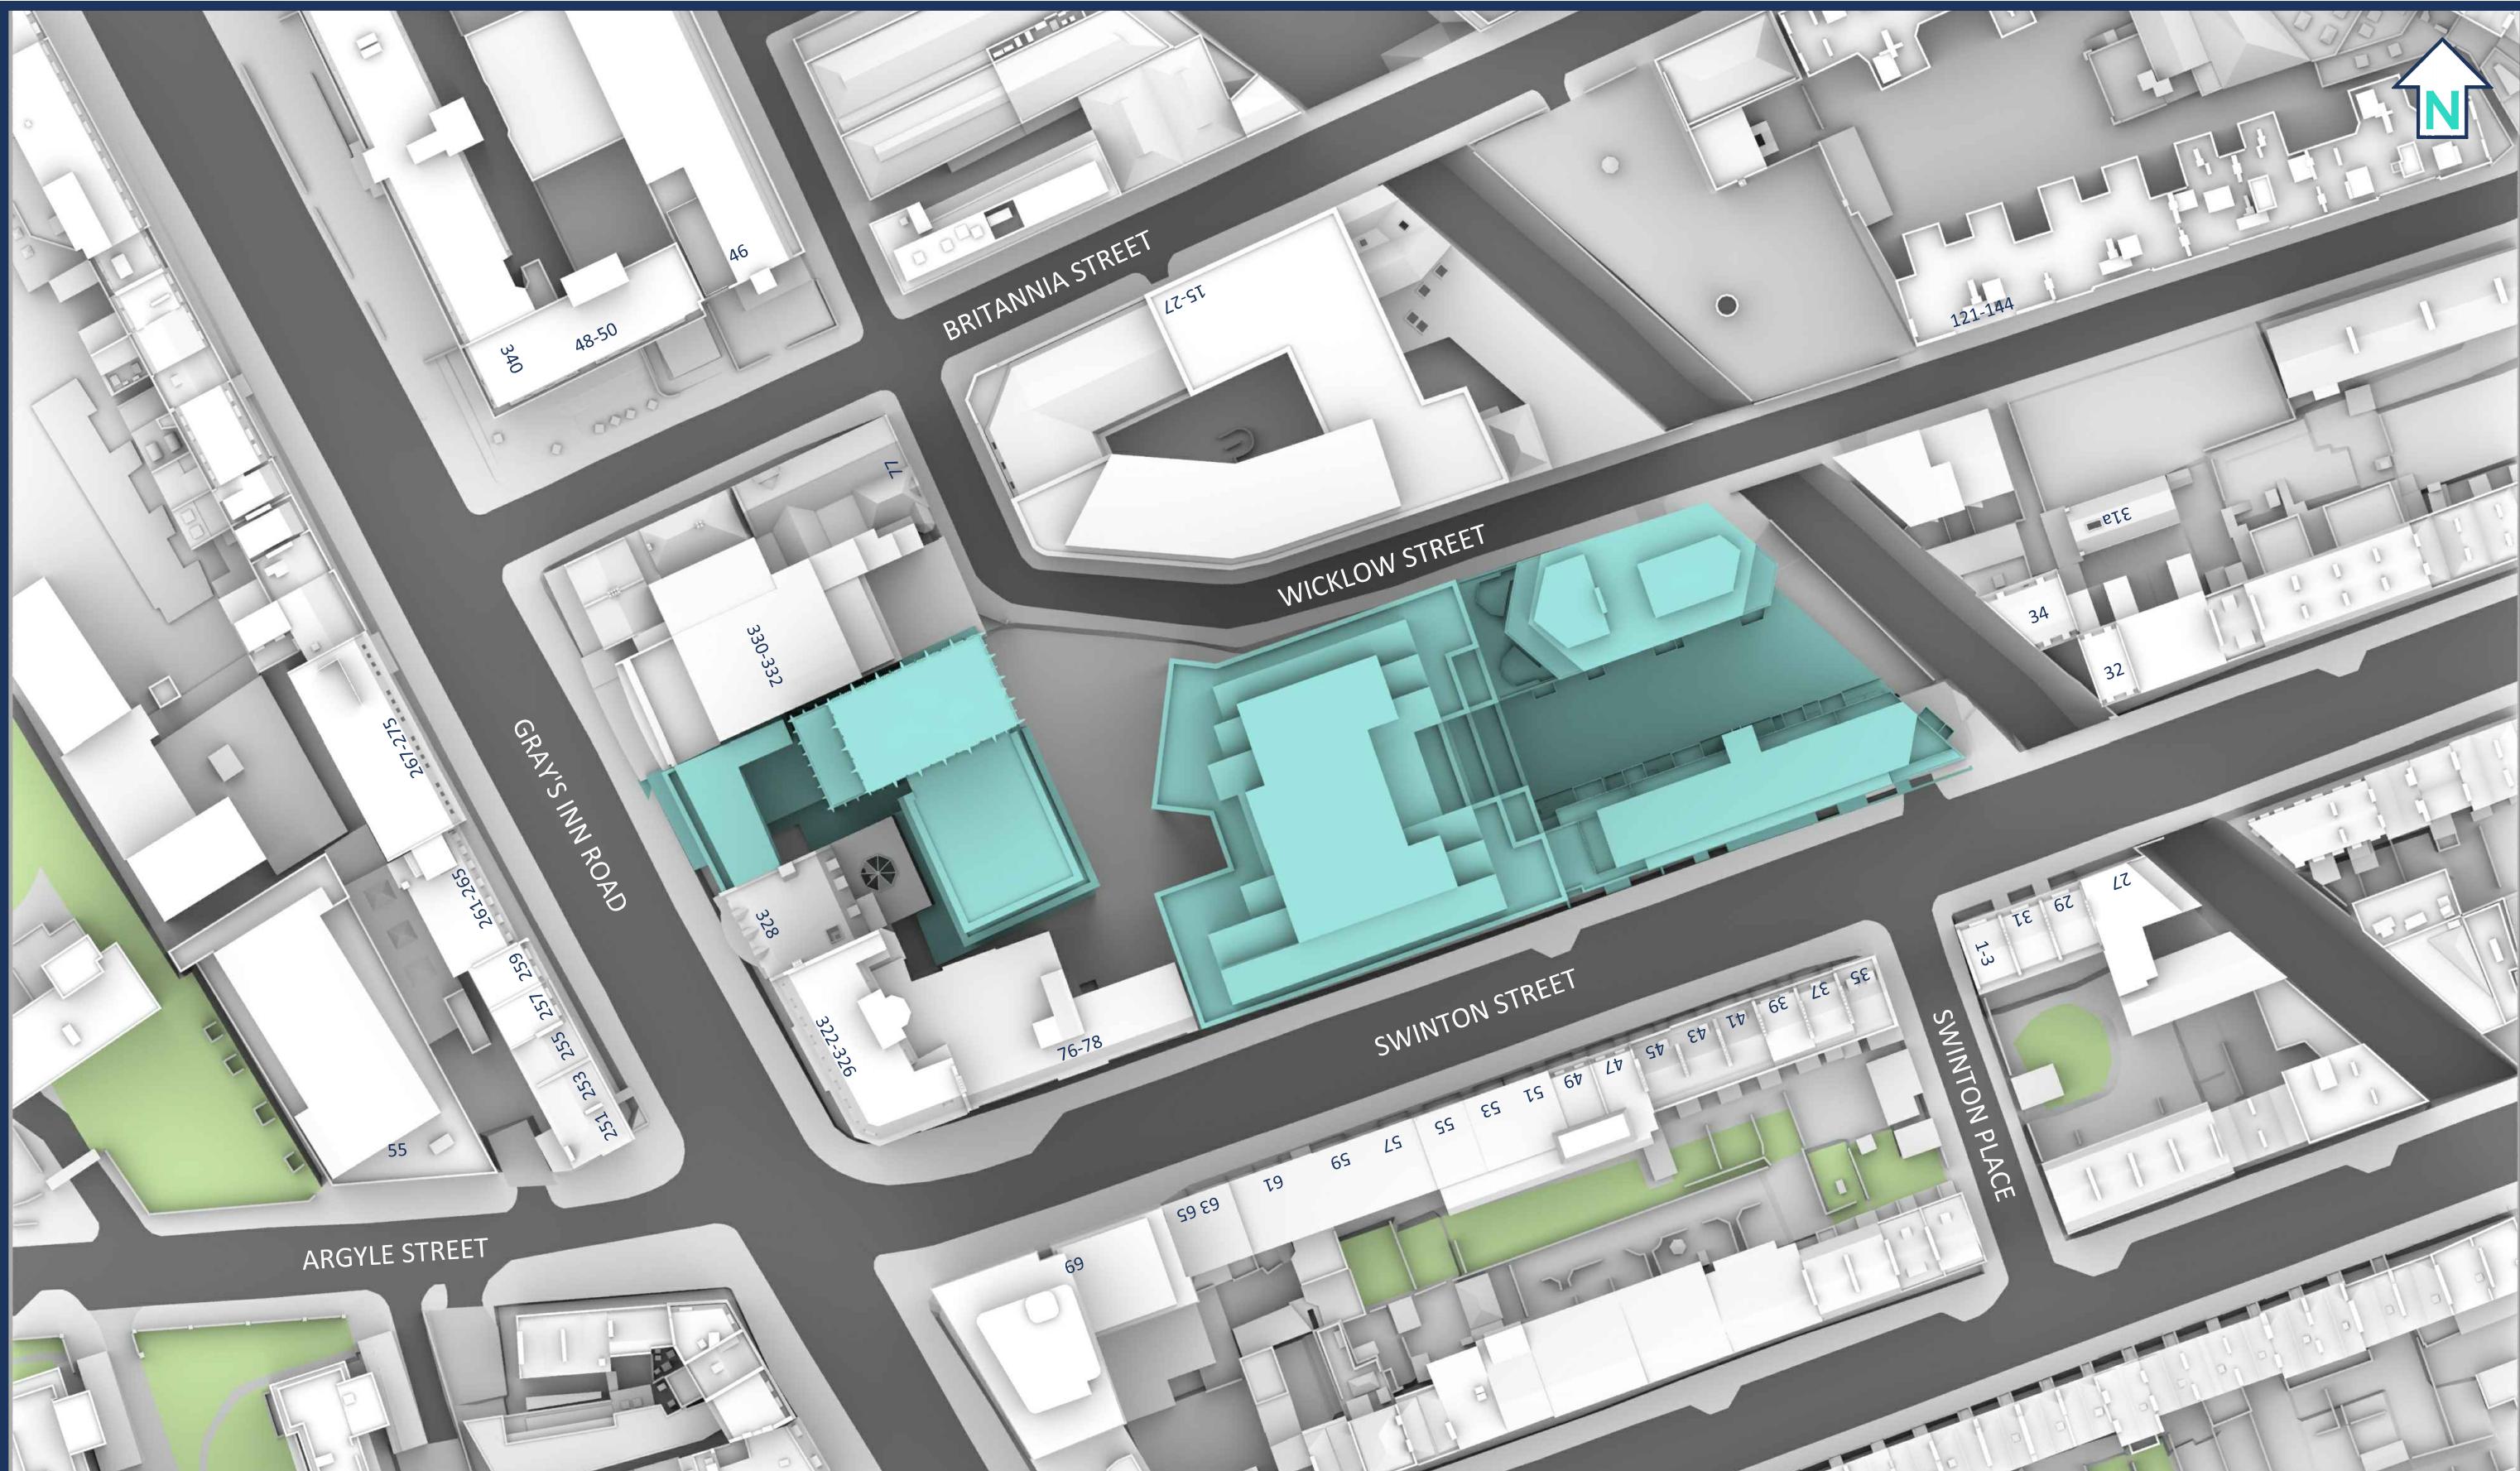

- 4.7 Seventy-two apartments have been analysed to establish their respective sunlight hours. With reference to the attached table of internal sunlight results contained within the appendix, 52 of 72 of dwellings (72%) exceed the suggested target minimum level of sunlight and the occupants of each unit will have access to very good levels of sunlight.

## 5 Conclusion

- 5.1 Despite the more onerous testing criteria associated with CBDM as compared to the previous ADF assessment, the appended results tables to this report show that the Proposed Development demonstrates a good level of compliance with BRE Guidance in terms of internal daylight amenity with 60% of rooms achieving their respective target illuminance value appropriate for the rooms' usage over at least 50% of the rooms area. Many of the rooms achieve considerably more than the required minimum. Similarly the scheme experiences good levels of sunlight exposure; 72% achieve the recommendations.
- 5.2 Where derogations are present, these are often as a result of the presence of balconies which provide vital outdoor amenity space. Regardless, a good balance has been struck between amenity requirements, some of which will inevitably conflict with daylight and sunlight levels.
- 5.3 As a result of the compliance rate and good daylight levels, we fully support this scheme in terms of internal daylight and sunlight amenity.
