

System Build-up "Sedum Carpet"

"Sedum Carpet" is a shallow, ground-covering extensive green roof type. In moderate climates, it gets along with approx. 60 mm of "Sedum Carpet" System Substrate.

"Sedum Carpet" is applied, especially if both, the load often bearing capacity of the roof and the expenses for maintenance, are restrictive.

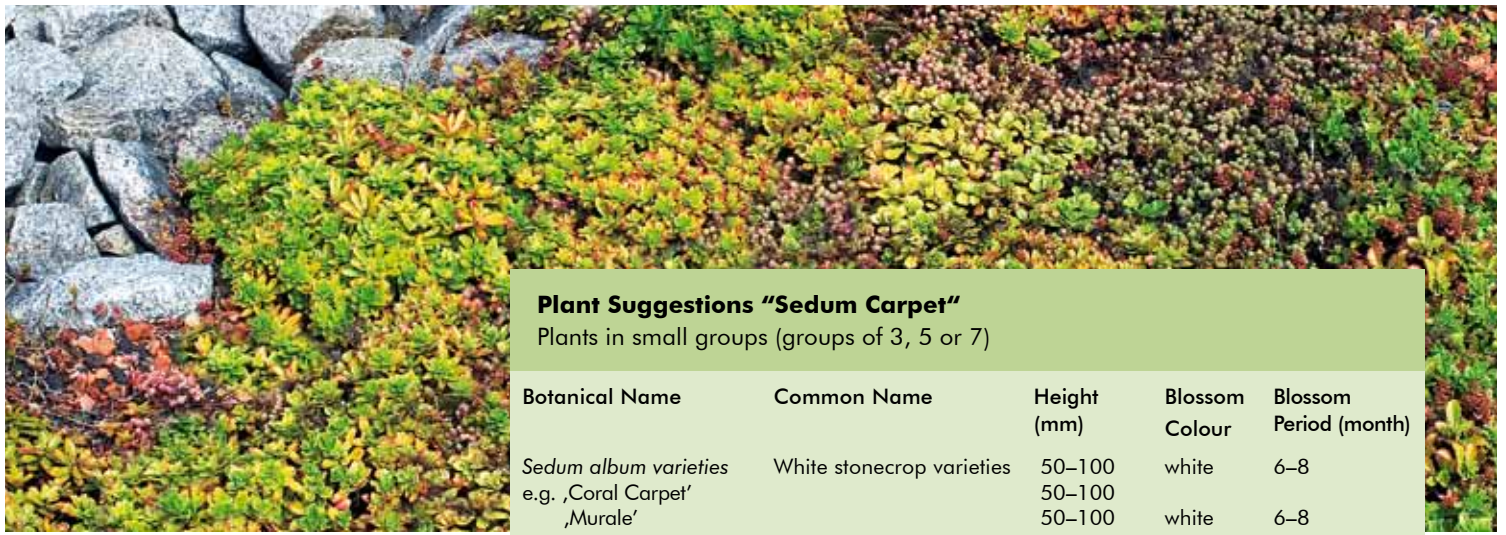

Proven sedum species, in combination with the appropriate system build-up, guarantee a long-lasting low maintenance green roof. The plant community "Sedum Carpet" contains various low-growing sedum species. The main bloo-

ming time is in early summer, with yellow or red and white flowers dominating at different times. Throughout the year, "Sedum Carpet" is represented in various shades of green. Red shades, particulary

in autumn, are a pleasant change in the visual appearance. "Sedum Carpet" is installed either by sedum cuttings or plug plants.
